This winter we are interested in conducting some result demonstrations with steers being fed Rumensin. We would like two situations: one where steers will be grazed on stockpiled fescue and another where steers will be wintered on silage and grain. We will be able to provide the Rumensin at no cost to the participant. Give me a call if there's interest.

Paraquat is a frequently used herbicide. One of the problems with this material in-so-far as EPA is concerned is that there was little odor.

In order to reduce the possibility of accidential ingestion, a new formulation is on the market containing valeric acid. In concentrated form, this odor is quite pungent and should serve as a deterrent.

The company says that the addition of the odorant does not effect the herbicidal activity of the material.

There was quite an article in last week's issue of **Southeast Farm Press** titled - - "They Produce Twice the County Average in Dark Tobacco Yields." It's a story about the Martin Brothers - - Jack, Beverly, G.C. and Carter.

Last Friday the Extension Tobacco Specialist from Maryland called relative to this article. He raised an interesting question - - "Why not leave tobacco on scaffold for 7 days rather than 24 to 48 hours?" His work in Maryland has shown that every day tobacco is scaffolded the weight is reduced by 7%. Therefore, in 7 days there would be nearly a 50% reduction in weight.

This may give you something to ponder when cutting tobacco next year.

The new cow-calf handbook is now ready for your use. We have a copy in this office if you would like to see a copy before purchasing. Additions and revisions will be made at no charge for the next five years. The cost is $10.00. Some county cattlemen have already purchased their copy.

Don't over look worming and grub control of cattle that will be carried over this winter. Grub control must be done no later than November 1. This is the absolute cutoff date.

Lawn management is essential this time of year. It's time to fertilize - - always fertilize in the fall. A good fertilization practice is to apply 15 pounds 10-10-10 per 1000 square feet; about December 1 add 4½ pounds of ammonium nitrate per 1000 sq. ft.

It's time to begin thinking about control of winter annual weeds in the lawn. In October or November, whenever temperature is 60 degrees or higher, apply a combination spray such as 2,4-D + Silvex. It will take out dandelions, chickweed, and henbit.

Feeder pigs are still a good commodity; in Farmville October 5, 2024 pigs averaged $105.90 per CWT.
